MOVENTO™

For Use On Bulb Onion For Management of Onion Thrips

SECTION 18 EMERGENCY EXEMPTION

Oregon Product ID. No. 2009OR006

FOR DISTRIBUTION AND USE ONLY IN THE STATE OF OREGON UNDER SECTION 18 EMERGENCY EXEMPTION

These use directions must be in possession of the user at the time of pesticide application. It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read entire Directions for Use and Disclaimer of Warranties before using this product. Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the registered product label for MOVENTO™ (Registration Number 264-1050).

Any adverse effects resulting from the use of MOVENTO™ under this specific exemption must be immediately reported to the Oregon Department of Agriculture.

EFFECTIVE PERIOD:

This specific exemption becomes effective 05-29-09 and expires on 09-15-09.

A maximum of 21,900 acres of dry bulb onions may be treated under this exemption, in the following Oregon counties only: Clackamas, Klamath, Marion, Malheur, Morrow, and Umatilla.

DIRECTIONS FOR USE

Apply Movento™ to dry bulb onions by ground, air, or chemigation. Ground applications must be made in a minimum of 15 gallons of water per acre. Aerial applications must be made in a minimum of 5 gallons of water per acre. Chemigation applications should be made at 100% input/travel speed for center pivot systems, or in 0.1 - 0.15 inches (2,716 - 4,073 gallons) of water per acre for other systems. Follow Application Instructions provided on the registered Movento™ product label.

CROP	PEST	Rate of MOVENTO™ fluid ounces/Acre
Onion (bulb)	Onion thrips	5.0

Notes and Restrictions

Pre-Harvest Interval (PHI): **7 days**

Maximum number of applications per crop season: **Two**

Minimum interval between applications: **7 days**

Maximum MOVENTO allowed per crop season: **10 fluid ounces/Acre (0.16 lb ai/A)**

Onions must be harvested prior to bloom.

Apply specified dosage of MOVENTO as needed for control. Treatment must be made when thrips populations begin to build and before a damaging population becomes established. Best results will be obtained when two applications are made on a 7-10 day interval, incorporated into a seasonal program where effective products with different modes of action are utilized in rotational sequences for management of thrips populations. **MOVENTO must be tank-mixed with a spray adjuvant having spreading and penetrating properties to maximize leaf uptake and systemicity of the active ingredient within treated plants; please contact your local Bayer CropScience representative or PCA for specific recommendations.**

Environmental Hazards

This product is toxic to aquatic invertebrates and oysters. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. This product may contaminate water through drift of spray in wind. Do not apply when weather conditions favor drift from treated areas. Drift and runoff from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwaters or rinsate.

This chemical has properties and characteristics associated with chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

This product is potentially toxic to honey bee larvae through residues in pollen and nectar, but not adult honey bees. Exposure of adult bees to direct treatment or residues on blooming crops can lead to effects on honey bee larvae.

Bee Protection Recommendations

- To minimize drift to adjacent fields, use ground application whenever possible.
- To the extent possible, local beekeepers should be notified prior to applying this chemical.
