

3 DRAINAGE

Q1 We use an absorbent pad to skim the oil off the top of our oil/water separator. What do I do with it when I take it out?

If the absorbent is not dripping oil, put it in the trash.

Using packaged absorbents (such pads, pillows, and booms) is a great way to increase the effectiveness of many oil/water separators. Don't put loose absorbent such as 'grease sweep' inside oil/water separators.

Use 'oil only' products when you are trying to remove oil from water. 'Oil only' products are designed to pick up oil without becoming soaked with water. Standard absorbents (such as grease sweep) pick up all liquids including water.
