**Re: Bullseye Glass Company
Source Testing**

Messrs. Kauth and Eisele

Enclosed with this submission is a Source Test Plan prepared by Montrose Air Quality Services (“MAQS”) addressing upcoming stack testing at our Portland, Oregon facility. As described in the MAQS source test plan, testing will be conducted to demonstrate compliance with 40 CFR Part 63 Subpart SSSSS¹ (“NESHAP 6S”), a recently adopted grain loading standard applicable to Colored Art Glass Manufacturers (“CAGMs”)(OAR 340-244-9070(1)(b)(A)), and to develop a maximum chromium usage allowance under OAR 340-244-9040(1).

Neither NESHAP 6S nor the CAGM rules have historically applied to Bullseye or other CAGMs. NESHAP 6S has historically applied to large continuous glass making furnaces and the CAGM rules were adopted in late 2016. As such, we are providing this letter as an addendum to the Source Test Plan to include supplemental technical information related to facility operating conditions, testing activities and data interpretation.

NESHAP 6S Testing

NESHAP 6S requires performance testing of each affected furnace unless multiple identical furnaces are operated in which case the rule allows testing of one each identical furnace (40 CFR 63.11452(a)(3)). Bullseye’s facility makes glass in batch fed furnaces with 14 furnaces potentially subject to 6S. All furnaces are connected to a single control device. Bullseye has five groups of identical furnaces as shown in the table below.

¹ Bullseye does not believe that NESHAPs 6S applies to its furnaces. Bullseye reserves the right to petition the EPA for a determination regarding the applicability of NESHAPs 6S.

Group	Furnace Unit	Potentially Subject to 6S*	Design	Manufacturer	Dimensions	Production Capacity	Charging Method	Operating Temperature	Fuel Type	Burner Configuration	Exhaust System
1	8	Yes	Discontinuous	Bullseye Glass	600	600	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	9	Yes	Discontinuous	Bullseye Glass	600	600	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
2	1	Yes	Discontinuous	Bullseye Glass	850	850	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	12	Yes	Discontinuous	Bullseye Glass	850	850	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
3	3	Yes	Discontinuous	Bullseye Glass	950	950	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	20	Yes	Discontinuous	Bullseye Glass	950	950	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
4	2	Yes	Discontinuous	Bullseye Glass	1050	1050	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	5	Yes	Discontinuous	Bullseye Glass	1050	1050	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	6	Yes	Discontinuous	Bullseye Glass	1050	1050	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
5	4	Yes	Discontinuous	Bullseye Glass	1550	1550	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	7	Yes	Discontinuous	Bullseye Glass	1550	1550	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	11	Yes	Discontinuous	Bullseye Glass	1550	1550	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	13	Yes	Discontinuous	Bullseye Glass	1550	1550	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW
	14	Yes	Discontinuous	Bullseye Glass	1550	1550	Screw Charger	2250F-2525F	Natural Gas	Corner/O2	BHW

*Bullseye does not believe that NESHAPs 6S applies to its furnaces. Bullseye reserves the right to petition the EPA for a determination regarding the applicability of NESHAPs 6S.

A NESHAP 6S compliance determination is production based. Table 1 to NESHAP 6S identifies the following emission limits:

- a. The 3-hour block average production-based PM mass emission rate must not exceed 0.1 gram per kilogram (g/kg) (0.2 pound per ton (lb/ton)) of glass produced; OR
- b. The 3-hour block average production-based metal HAP mass emission rate must not exceed 0.01 g/kg (0.02 lb/ton) of glass produced.

Further, 63.11452(3)(b)(4) requires conducting at least three separate test runs with a minimum duration of 1 hour for each test run.

Furnace Unit	Tank Size	Potentially Subject to 6S**	Source Test Glass	As	Cd	Co	Cr	Mn	Ni	Pb	Se
12	850	Yes	Down								
13	1,550	Yes	Idle								
14	1,550	Yes	Idle								
20	950	Yes	Idle								

**Bullseye does not believe that NESHAPs 6S applies to its furnaces. Bullseye reserves the right to petition the EPA for a determination regarding the applicability of NESHAPs 6S.

Data reduction to demonstrate compliance with 6S production-based limit (PM or total 6S metal HAPs) will generally follow 63.11452 as follows:

Determine average hourly emission rate:

$$\frac{\text{Run 1 } \frac{lb}{hr} + \text{Run 2 } \frac{lb}{hr} + \text{Run 3 } \frac{lb}{hr}}{3}$$

Determine mass emissions across 16 hour production cycle:

$$\text{Total Emissions} = \text{Average Hourly Emission Rate} \times 16$$

Determine production-based emission rate:

$$\text{Production Based Emissions} = \frac{\text{Total Emissions (lb)}}{\text{Total Glass Produced from 5 Furnaces (tons)}}$$

CAGM Particulate Matter Grain Loading Rule PM Compliance Testing

OAR 340-244-9070(1)(b)(A) requires Tier 2 CAGMs to conduct a source test to demonstrate that the emission control device does not emit particulate matter in excess of 0.005 grains per dry standard cubic foot. Source testing at Bullseye for this purpose includes the following characteristics:

- Bullseye proposes to conduct outlet PM testing on BHW over the course of one approximately 16 hour period including three test runs of sufficient duration to collect sample masses above MDL, as feasible.
- Factory will be operated under normal operating conditions operating up to 11 furnaces containing the 7 glassmaking HAPs identified in OAR 340-244-9010(11) (As, Cd, Cr, Pb, Mn, Ni, & Se) and cobalt.
