

**To:** Rogue River Basin TMDL file **Date:** May 27, 2010  
**From:** Dan Turner, Senior Water Quality Analyst  
**Section:** Watershed Management, Water Quality Division  
**Subject:** Addendum – Clarifications to Rogue River Basin TMDL

This memorandum amends Appendix B of the Rogue River Basin Total Maximum Daily Load (TMDL) document of December 2008. There is a unit error in Appendix B, Figure B31, pages B-28 to B-30. The correct values are 1000 times greater than those originally presented. Additionally, the sub figure related to the Rogue River should have been labeled “by 500 m reach”. The errors were limited to Figure B31 in Appendix B and did not impact the calculation of TMDL loading capacities (Section 2.5) or the determination of nonpoint source loading allocations (Section 2.7) as expressed in the final TMDL document. The corrected figure is presented below.

**Figure B31. Excess solar load for all of the impaired reaches.**
