

Grapevine Pathogen Testing Project Request Form - 2022

The Oregon Department of Agriculture (ODA) Plant Health Program has funds available for testing of *Vitis* spp. planting materials for several quarantine pathogens of concern for grapevine. These pathogens are *Xylella fastidiosa* (Pierce’s Disease), *Grapevine red blotch virus*, and Grapevine leaf roll-associated virus 3. These pathogens were identified as being of significant concern to Oregon’s grape industries. This project was funded by a Plant Protection Act Section 7721 (PPA 7721) grant awarded to the ODA Plant Health Program. More information is available at www.oda.direct/GrapeQuarantine.

Fill out the following information completely and email this form and any applicable documents to Dipak Poudyal at Dipak.Poudyal@oda.oregon.gov.

Shipment Information Provide all information about the *Vitis* spp. (grapevine) material imported. If there are multiple types of material or cultivars in one shipment or associated with one phytosanitary certificate (ie., Pinot Noir vs. Cabernet or potted plants and bareroot plants), list them as separate shipments.

Shipment 1

Grape variety/cultivar:		Shipment Date:		
Phytosanitary Certificate Number:				
Did this material originate from a certified nursery?		Yes	No	Unknown
Supplier:		Origin (state):		
Quantity:	Type:	No. Samples Available for Testing:		
Location for Sampling:		OR	Send me a shipping label	

Shipment 2

Grape variety/cultivar:		Shipment Date:		
Phytosanitary Certificate Number:				
Did this material originate from a certified nursery?		Yes	No	Unknown
Supplier:		Origin (state):		
Quantity:	Type:	No. Samples Available for Testing:		
Location for Sampling:		OR	Send me a shipping label	

Shipment 3

Grape variety/cultivar:		Shipment Date:		
Phytosanitary Certificate Number:				
Did this material originate from a certified nursery?		Yes	No	Unknown
Supplier:		Origin (state):		
Quantity:	Type:	No. Samples Available for Testing:		
Location for Sampling:		OR	Send me a shipping label	

Grapevine Pathogen Testing Request Form – page 2

Instructions and Frequently Asked Questions

Fill out the Contact Information and Shipment Information sections completely and email the completed form to Dipak.Poudyal@oda.oregon.gov. If you have more than three shipments/cultivars/types of material, send as many request forms as necessary. There is no limit on the amount of testing that can be requested at this time.

What is eligible for testing?

One objective of this project is to assess the cleanliness of imported grapevine material during the implementation phase of Oregon’s updated grapevine quarantine. Effective September 1, 2021 all imported material must 1) originate from an approved certification program or 2) have originated from mother plants tested for *Grapevine red blotch virus* and Grapevine leaf roll-associated virus 3. After January 1, 2023, all imported material must originate from an approved certification program.

Any grapevine planting material – ie., potted plants, bare-root plants, cuttings, or bench grants that have been imported after September 1, 2021.

How much material is required for testing?

The preferred size for each sample would be a 4” cutting, regardless of the type of material imported. Ideally, the number of samples would be sufficient to determine at a 95% confidence a 5% level of infection (ie., maximum of 59 samples per shipment). However, we recognize that that may not be realistic. In the section “No. of Samples Available for Testing”, let us know the quantity that you have available.

What happens if my imported grapevine material tests positive for a quarantine pathogen?

Any material submitted to this testing project will be tested for three pathogens - *Xylella fastidiosa* (Pierce’s Disease), *Grapevine red blotch virus*, and Grapevine leaf roll-associated virus 3. All of these pathogens are considered quarantine pests under Oregon’s Grape Pest and Disease Quarantine (OAR 603-052-0051)

How will this data be shared?

This project is funded through a USDA Plant Protection Act Section 7721 grant. As part of the grant process, at least two reports will be submitted to USDA. Any testing results included in those reports will be anonymous – no vineyard or nursery names will be used.

Proprietary information will be kept confidential by the department to the extent permitted by the Oregon Public Records Law or to the extent otherwise possible (as determined by the department) as the department carries out its legal obligations, including in litigation and in contested cases.
