Label the approaches, lane configurations, and directions to correspond with the table below

Microsimulation Performance Measures

There are several outputs from microsimulation models that should be compared to field conditions. Record the following conditions, approximated from your field observations

Approach	□ Eas	tBound	or	□ Wes	stBound	or	□ Nort	thBound	or	□ Sou	thBound	l or
Movement (Circle Appro.)	L LT	T LTR	R TR									
~Average Queue Length												
~Maximum Queue Length												
Upstream Blk Time (~%)												
Storage Blk Time (~%)												
Arrival Type –	Platod	on Ra	ındom	Platod	on Ra	andom	Platod	on Ra	ındom	Platod	on Ra	andom
If Platoon	Gree	en	Red									

Describe the severity of congestion at the intersection:	
----------------------------------------------------------	--

Additional Notes a	and Ubservations	
		
		
		

Graphics from this Field Inventory Worksheet were copied from the Highway Capacity Manual 2000, Chapter 16, Appendix I, Field Saturation Flow Rate Study Worksheet.

IMPORTANT DATA - CHECKLIST / CHEAT-SHEET

Yes	No	
		Is a vehicle count for your study being conducted during your collection?
		Is your collection occurring during a time period that represents the traffic conditions that occurred when the vehicle counts were collected?
		Are you having a short (sample) vehicle count performed during this collection to adjust or to help ensure that your counts are comparable to the conditions witnessed during inventory?

Geometric Data

Street names

Lane/shoulder/median widths

Lane configurations

Sidewalk widths and locations

Intersection and access spacing

Horizontal and vertical roadway alignments

Storage bay lengths (from stop-bar to start of taper)

Taper bay lengths
Bike lanes and width
Parking width and
locations

Operational Data

Speed limits

Intersection controls (signalized, stop sign, yield, merge ...)

Signal characteristics (timed, actuated, split-phased, left turns ...)

Signing (especially turn prohibitions)

Parking locations, signing, striping, and frequency of parking maneuvers

Crosswalk location and frequency of use

Bus stop locations and bus schedule

Rail crossings, train frequency and duration of blockages

Simulation Data

Number of Detectors, length, and distances from stop bar

Locations where vehicles improperly use the shoulder or median to move around blockage points or due to driver confusion

Turning Speeds (if unusual geometrics or conditions exist)

Lane Utilization

Turning alignment

Important Travel Patterns (OD Data)

Lane positioning lengths or land marks

Approximate average and maximum queues

Intersection and Turn Bay Blockages

Arrival type
