¹ Rates are adjusted to the U.S. standard million population and are per 100,000. Age-adjusted death rates allow the comparison of Oregon and the U.S. as if the population structure of each were identical. (Oregon's population is older than the U.S. as a whole.) Any differences in rates are due to factors other than age. U.S. rates in this table were calculated using the federal Center for Disease Control and Prevention's WONDER (Wide-ranging Online Data for Epidemiological Research) system (<http://wonder.cdc.gov>). These rates may vary slightly from rates published by the National Center for Health Statistics and the Oregon Center for Health Statistics due to different file closure dates and different population estimate methodologies.

² Ranked from high (1) to low (51) among the 50 states and the District of Columbia, unless otherwise specified. Rankings for some causes of death are not out of a total of 51 because states with unreliable data have been excluded.
