

RESEARCH BRIEF

The mission of the Oregon Youth Authority is to protect the public and reduce crime by holding youth accountable and providing opportunities for reformation in safe environments

Recidivism Outcomes FY2001–FY2020 Cohorts

November 2021

Introduction

One of the primary goals of the juvenile justice system is to protect the public by reducing juvenile criminal behavior. Recidivism generally refers to the number or percentage of youth who engage in new criminal offending after receiving juvenile justice services. Recidivism rates are one way to measure how OYA services improve public safety. Publishing recidivism outcomes reflects the agency's values of excellence in public service, openness, and accountability.

This report updates the agency's previously published recidivism outcomes with an additional 12 months of data and is presented in three main sections. The first is *Visual Summary*, which depicts recidivism trends at the 36-month tracking period. The following section, *Understanding Recidivism*, provides important definitions and detail around the OYA recidivism measure. The final section, *Recidivism Detail*, includes a series of data tables with 12-, 24-, and 36-month recidivism rates¹ broken down by OYA probation youth, OYA parole youth, and Department of Corrections youth released directly to post-prison supervision from OYA facilities. The tables also provide subpopulation breakouts by sex, age at start-tracking date, race/ethnicity, and crime category at commitment.

Data for the recidivism measures are captured in the Juvenile Justice Information System (JJIS), Oregon's statewide data system that supports the partnership of OYA and the 36 county juvenile departments to track juveniles through the entire justice process. JJIS data are augmented with sentencing data from the Department of Corrections information system, which enables OYA to monitor for recidivism after an individual ages out of the juvenile system.

¹ At the time of this report, the maximum tracking periods for the FY2019 and FY2020 cohorts were 24 and 12 months, respectively.

Visual Summaries

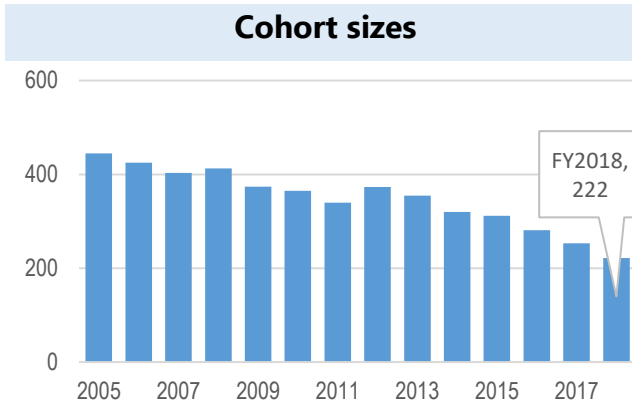

Recidivism rates of FY2001 – FY2018 cohorts after 36 months. The graphs in this publication omit subpopulations with fewer than 30 youth. A more detailed discussion of this procedure is provided in the “Understanding Recidivism” section, which explains why recidivism rates calculated on small numbers of youth may be misleading and also elaborates on the reasons for focusing attention on the 36-month tracking period.

OYA Probation

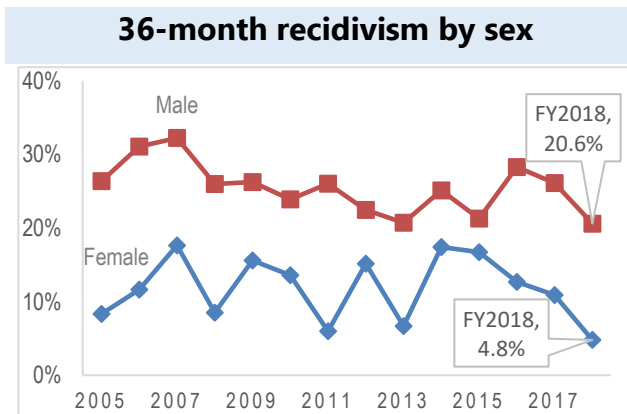

Youth are committed to OYA probation by a juvenile court judge, who places the youth in OYA's legal custody for supervision in a community setting. These youth are typically placed in residential treatment programs or OYA-certified foster homes. OYA Juvenile Parole/Probation Officers provide ongoing case management and supervision until youth terminate from OYA custody. Recidivism is tracked from the date a youth is committed to OYA probation.

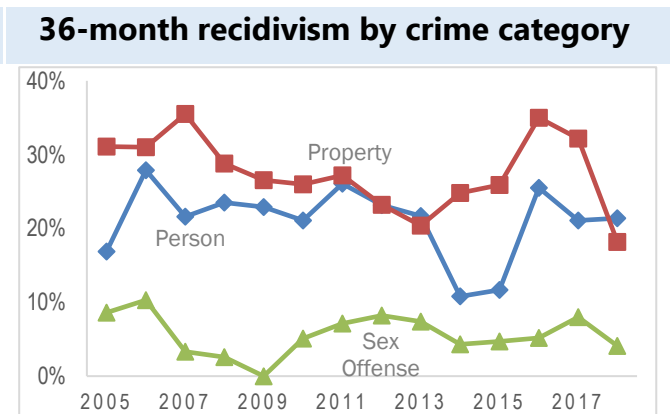

Commitments to OYA probation have been trending downward since FY2005. (Table 1)

Recidivism rates among OYA Probation youth vary from year-to-year. At 17.6%, the recidivism rate of the FY2018 cohort is lower than usual. (Table 1)

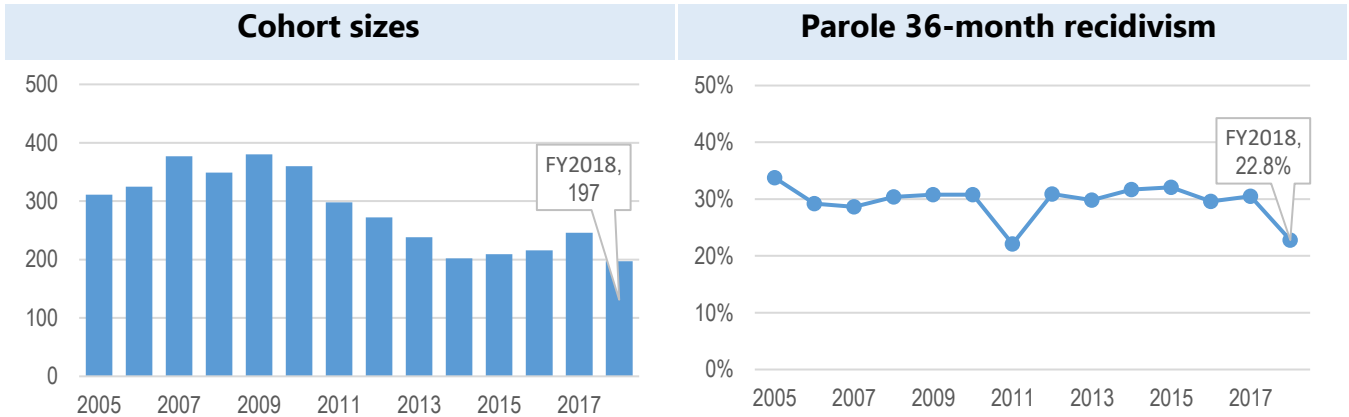

Recidivism rates are lower among females than males. Female recidivism rates vary more widely because of the small population size. Females represent about 20% of the OYA probation population. (Table 2)

By crime category, youth placed on OYA probation for sex offenses recidivated at the lowest rates. Property crime recidivism dropped sharply in the FY2018 cohort. There were too few cases to plot trends for every cohort for several crime categories. (Table 5)

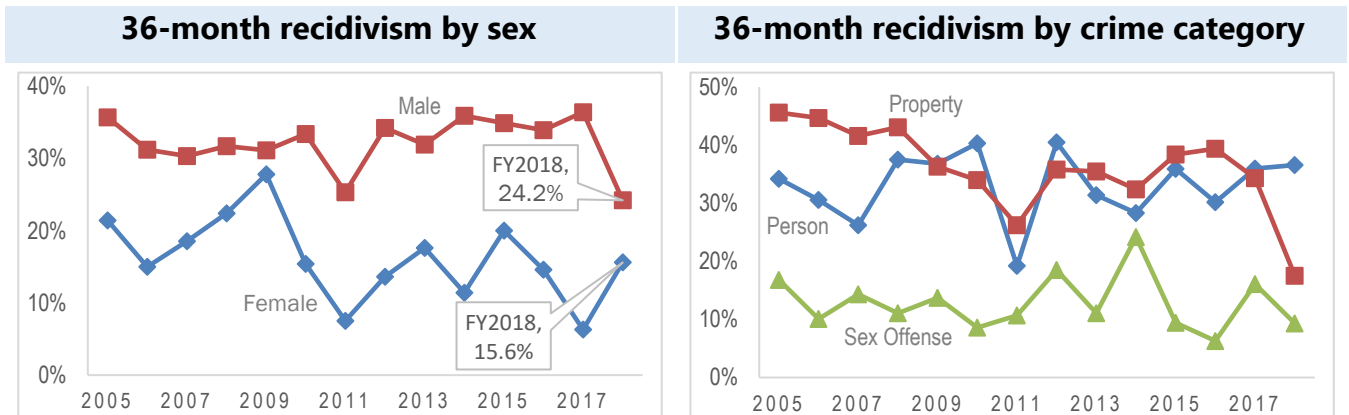

OYA Parole

A juvenile court can commit a youth to OYA for placement in a youth correctional facility. OYA staff provide these youth with a range of treatment and education programs designed to address the factors that contributed to their criminal behavior. With treatment progress, youth may be recommended for release to parole. Once paroled, the youth will be placed in a community setting such as residential treatment, foster care, independent living, or at home. An OYA Juvenile Parole/Probation Officer continues the youth's supervision in the community until the OYA case is terminated. Recidivism is tracked from the date a youth is released from close custody to OYA parole.

In 2018 the number of parole releases was the lowest since at least 2005. (Table 6)

Recidivism rates of OYA parole cohorts have hovered near 30% since FY 2006. The recidivism rates for the FY2011 and FY2018 cohorts are unusually low. (Table 6)

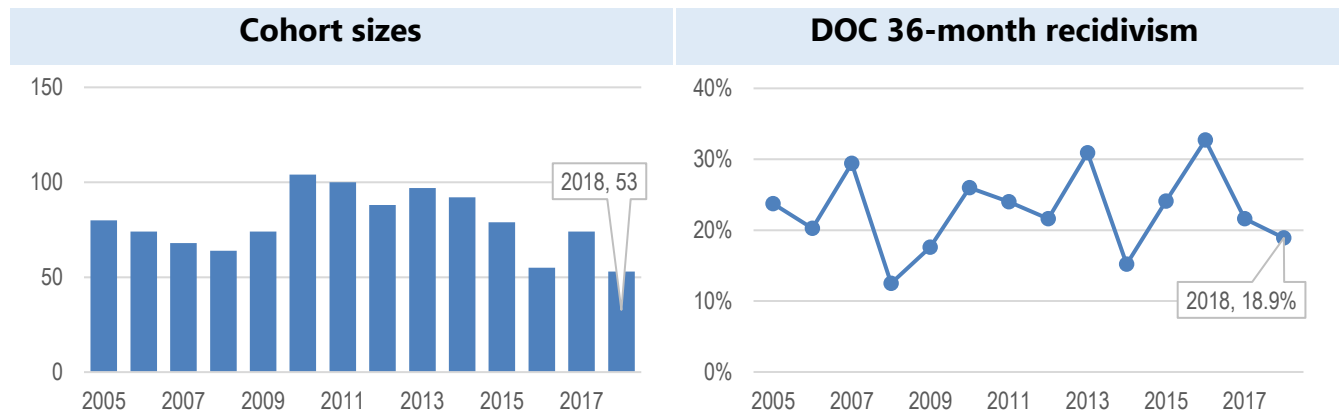

Females on OYA parole recidivated at lower rates than their male counterparts. In the FY2018 cohort, recidivism dropped sharply for males but not for females. (Table 7)

Juveniles committed to OYA facilities for sex offenses typically recidivate at lower rates compared with youth committed for other offenses. Property crime recidivism dropped sharply in the FY2018 cohort. There are too few cases to plot trends for most crime categories. (Table 10)

Department of Corrections Youth

Youth convicted of crimes through an adult court can be placed in an OYA close-custody facility until age 25; however, these youth remain in the legal custody of the Department of Corrections (DOC). OYA tracks recidivism of DOC youth released directly to post-prison supervision from an OYA facility.

Recidivism is tracked from the date a DOC youth is released to the community from OYA close custody. Because DOC cohort sizes are relatively small, there are generally too few cases to break out the results to report recidivism by specific youth attributes, such as sex or crime type.

The number of DOC youth released to the community each year from OYA close custody depends on the sentence length each youth received in adult court. These DOC release cohorts do not include youth who returned to DOC to complete their sentences in adult institutions. (Table 11)

The relatively small number of DOC youth in annual recidivism cohorts can contribute to fluctuations in recidivism rates. (Table 11)

Understanding Recidivism

Recidivism may be broadly defined as a relapse into criminal behavior. However, to measure recidivism in a consistent and unambiguous manner requires us to specify four variables: (a) group of people to track, (b) date to start tracking, (c) length of time to track, and (d) recidivism event.

Group of people to track. In this report and the supporting tables, we report recidivism on three key populations:

1. OYA Probation: Youth committed to probation and placed in the legal and physical custody of OYA for a period of out-of-home care and supervision.

2. OYA Parole: Juveniles with a first-time release to parole from OYA close custody.²
3. DOC Youth: Youth convicted as adults with a first-time release to parole or post-prison supervision from OYA close custody. These youth are in the legal custody of DOC but were placed in the physical custody of OYA at a youth correctional facility.³

In addition, we provide recidivism outcomes by several breakouts of the above youth populations, including sex, race/ethnicity, age, and type of committing crime.

Date to start tracking. The date to start tracking recidivism differs for each of the three key populations:

1. OYA Probation: Date each youth was committed to OYA probation.
2. OYA Parole: Date each youth was released to parole from OYA close custody.
3. DOC Youth: Date each youth was released to DOC post-prison supervision from OYA close custody.

Length of time to track. OYA calculates recidivism rates at 12, 24, and 36 months following the start-tracking date.

Recidivism event. Any felony adjudication (juvenile court) or felony conviction (adult court) with a disposition of formal supervision (e.g., probation, OYA commitment, DOC prison sentence, or local control jail sentence).

Participants and data

To help explore whether any trends are emerging in recidivism rates, we calculate rates annually based on Oregon's fiscal-year calendar. Each fiscal-year cohort includes all youth in the specified population whose start-tracking date is within the date range of the fiscal year. A fiscal year begins on July 1 and ends June 30 and is denoted by the year in which it ends. For example, the FY 2020 OYA parole cohort refers to youth released to parole between July 1, 2019, and June 30, 2020.

Data for the recidivism measure are maintained in the Juvenile Justice Information System (JJIS), the central electronic data repository for OYA and all of Oregon's county juvenile departments. JJIS reporting tables are periodically updated with adult sentencing records from the DOC information system, thus enabling OYA to track the recidivism status of youth offenders into adulthood.

² OYA does not track recidivism outcomes of youth whose commitments are terminated or expired at release from close custody. This can happen when the juvenile court limits the duration of the commitment period or when a youth ages out of OYA custody. (OYA supervision is limited to youth under age 25.)

³ OYA does not track recidivism outcomes of DOC youth who were returned to the physical custody of DOC to complete their sentences and then released from DOC close custody at a later date.

Calculating recidivism rates

Rates are inclusive of the entire tracking period. Recidivism rates reflect the number of youth who have recidivated as a percentage of the population (or breakout group) under examination. Recidivism rates include all youth who have recidivated up through the end of the tracking period. In other words, youth who recidivate within the 12-month tracking period are included in the recidivism rate at the 24-month tracking period along with those who recidivated between 12 and 24 months. Likewise, the numerator of the 36-month recidivism rate includes youth who recidivated at any time prior to 24 months along with those who recidivated between 24 and 36 months.

Rates for small groups not reported. When reporting recidivism for groups of fewer than 30 youth, we do not publish the rate. Rates based on small numbers can be very misleading. For example, there was only one Asian youth in the FY2016 OYA Probation population. By the end of 36 months, the youth had not recidivated—zero percent recidivism. The FY2015 OYA Probation population included three Asian youth and two had recidivated by the end of 36 months—67% recidivism. Clearly, the difference between the two rates has little meaning. Our threshold of at least 30 youth means that each youth who recidivates can impact the rate by no more than 3.3 percentage points. Although we suppress recidivism rates for small groups, we include the actual counts in the *Recidivism Detail* data tables.

Putting recidivism rates in context

Comparing populations is discouraged. Clarity about the four variables described earlier in this section (see the introductory paragraphs under “Understanding Recidivism”) is essential both for measuring and interpreting recidivism rates. This point is important because we so often want to know how one group is performing relative to another. Unfortunately, it is nearly impossible to find two reports using identical definitions for these variables. For example, the way in which OYA specifies the variables is largely consistent with the definition adopted by the Oregon Department of Corrections⁴, except for the populations tracked. However, that difference is important because it would be reckless to compare the raw recidivism rates of juveniles and adults. Moreover, currently there is no national standard for measuring recidivism among juveniles, so comparisons with other states are also ill advised.

Longer tracking periods are preferred. The recidivism tracking period itself presents some issues. In general, we prefer to focus on the 36-month tracking period rather than the 12- and 24-month tracking periods. This preference is because the longer tracking period captures more of

⁴ The similarity of the OYA and DOC measures arises from a request of the Joint Committee on Ways and Means Public Safety Subcommittee during Oregon’s 2003 legislative work session. The subcommittee expressed interest in an OYA performance measure related to recidivism “similar to the Department of Corrections measure that tracks felony convictions within three years of release from prison.”

those who actually commit new crimes in the statistic. This occurs for two reasons. First, there is a longer time period in which to commit new crimes. Second, and somewhat less obvious, the longer tracking period allows more time for sentencing. Recall that, by OYA definition, a felony crime does not count as recidivism until it receives a sentence of formal supervision. The actual crime and arrest may have occurred in a prior tracking period. The time it takes a case to work its way through the justice system represents a smaller fraction of the overall tracking period at 36 months. Hence, this longer tracking period provides a better and more stable vantage point when looking for trends.

Recidivism Limitations

Although the findings in this study are important for understanding recidivism, there are a few limitations to keep in mind. First, existing recidivism measures only examine subsequent felony offending, which does not fully reflect whether youth remained crime-free. It is possible that youth were subsequently arrested or referred to the juvenile or adult criminal justice system in Oregon for a misdemeanor offense or other violations. While the Oregon Youth Authority could report juvenile misdemeanor-level offending recorded in the Juvenile Justice Information System (JJIS), analysts do not currently have access to a comparably reliable data source for adult misdemeanor offenses in Oregon.

Recidivism matching algorithms were adjusted effective July 1, 2018 to remove social security numbers from the matching process. Internal analyses do not provide any indication that this limitation resulted in matching errors, however it is not possible to fully test the impact of this policy.

Another potential concern is that youth in the OYA Probation or OYA Parole cohorts could be placed in residential commitment programs during the recidivism tracking periods. These programs are designed to suppress delinquent activity and limit the “opportunity” for youth to engage in criminal behavior, which is commonly referred to as “incapacitation” from crime. As some youth may be in custody during the recidivism tracking period, recidivism rates reported here should not be interpreted as the extent to which youth remain crime-free after completing state custody or supervision.

Finally, the impact of the COVID 19 pandemic on recidivism rates is unclear, and readers are encouraged to interpret the most recent recidivism rates with caution. The COVID pandemic resulted in the largest one-year decline in juvenile criminal referral processing in the history of the state of Oregon. It’s reasonable to believe that COVID restrictions, reduced mobility and other factors contributed to a reduction in offending, arrests, case processing and recidivism outcomes during 2020-21. OYA will continue to closely monitor these rates.

OYA Detailed Recidivism Outcome Tables

Recidivism outcomes reflect data obtained from the Juvenile Justice Information System (JJIS) at the time the reports were run. Small variations from rates reported previously are normal and expected due to updates in JJIS.
